2022 LDD/Gypsy Moth Residential Aerial Application Pricing Guide

\$368.00/base rate (\$325.66+HST) for each property up to one (1) acre in size
Properties over one (1) acre will be charged an additional **\$99.00 per acre**
(\$87.61+HST)

Conditions

1. The pricing for our service is based on three components. The administration of the agreement which includes the set-up of the program, the mapping, invoicing, customer service, regulatory compliance, and documentation. This represents 30% of the overall cost of the program. The timing and first application, which is the most important application to obtain satisfactory results represents 40% of the overall program cost. The final application designed to control late hatches and any caterpillars that were not actively feeding after the first application or may have migrated from elsewhere represents 30% of the overall cost. If we have a signed agreement and the program is cancelled or cannot be completed for any reason the landowner will be charged for the service that has been delivered to that point.
2. A non-refundable deposit of 25% of agreement value will be assessed to anyone who decides to cancel the spray applications prior to the program close date of March 15th. Cancelling after March 15th will result in a 50% refund rate as the btk will have been ordered/purchased and all planning will have been completed. Cancelling after the first application will result in no fee return.
3. Pricing has been set to provide good value and the lowest pricing we can provide without implementing a discount schedule. Therefore, OCFDC will not offer any additional discounts for number of participants.
